Customer Evaluation

STEP 01 · UNDERSTAND

Discovery

01

01

Learn what they're building

02

Understand the product

03

Map the flow architecture

04

Find the user pain

05

Review the current STT setup

06

Collect real learner audio

OBJECTIVE

What we want to figure out

What they built, where learners struggle, and the baseline to beat.

STEP 02 · UNDERSTAND

Success criteria

02

01

How they measure today

02

Whether they measure it correctly

03

Which KPIs they track

04

Where the blind spots are

OBJECTIVE

What we want to figure out

Their product through its KPIs, and whether those numbers hold up.

STEP 03 · BUILD THE BENCHMARK

Establish the source of truth

03

01

Use human transcripts first

02

Use other models outside both vendors

03

Keep learner mistakes as spoken

OBJECTIVE

What we want to figure out

A fair answer key that no vendor wrote.

STEP 04 · BUILD THE BENCHMARK

Rectify with Truth File Corrector

04

01

Load the answer key into AssemblyAI

02

Check it against the audio

03

Fix the labels, not the models

OBJECTIVE

What we want to figure out

A corrected source of truth we can trust.

STEP 05 · RUN AND SCORE

Run, score and validate

05

01

Every clip, live, at real-time pace, with the agreed settings.

Stream to Universal-3.6 Pro

02

The same audio, the same pace, the closest matching endpointing.

Re-run the current vendor

03

Each vendor gets audio and settings only. The answer key stays with us.

Send audio, never answers

04

Accuracy, latency and language, recomputed from saved responses with session IDs.

Score from raw output

OBJECTIVE

What we want to figure out

Same audio, same scoring, nothing hidden.

STEP 06 · MEASURE

What we measure

06

01

WER
FWER
Sentence error rate
Semantic WER
Missed entity rate
Code-switching WER

Accuracy

02

TTFT
TTCT
End-of-turn latency
Turns that never end
All at p50 and p90

Latency

03

Cost per learner hour
Session time, pauses included
Add-ons in use

Pricing

OBJECTIVE

What we want to figure out

Every metric, on the same audio, for every vendor.

STEP 07 · IMPROVE AND DECIDE

07

Diagnose, tune and pilot

01

Group the failures

02

Tune one setting at a time

03

Re-score and repeat

04

Pilot with go-live criteria

OBJECTIVE

What we want to figure out

A clear yes, backed by their own data.
